

Why switch to LED Plug-In Lamps?

LED Plug-In Lamps are the fast and easy way to upgrade from Traditional Compact Fluorescent lamps to LED.

Current offers a variety of LED Plug-In Lamp options, so you can choose the best solution for each application.

55% Energy Reduction

No Mercury in LED

4x Longer Rated Life

Quick Payback

Current's wide array of **LED Plug-In Replacement Lamps** make it possible to upgrade compact fluorescent applications to LED without replacing an entire fixture. LED plug-in lamps present a long-term replacement lamp option when compact fluorescent lamps or CFL ballasts become unavailable. Horizontal and vertical orientation lamps are offered in some areas in order to minimize energy consumption and improve fixture efficiency. Choose the lamp orientation that best suits the application. SpectraChoice™ color temperature selectable lamps are available in many LED plug-in lamp categories.

Type A LED plug-in lamps are direct replacements for pin-based compact fluorescent lamps. These lamps operate from existing CFL ballasts and are the simplest way to upgrade to LED.

Type B LED plug-in lamps replace pin-based compact fluorescent lamps and eliminate costs and availability concerns related to CFL ballasts. Type B lamps operate from mains voltage. To use these lamps, the fixture is re-wired to bypass the ballast. A Type B 2-pin G24 lamp can fit in 2-pin G24d or 4-pin G24q/GX24q sockets as shown below.
